***Election/Restrictions***

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claim 1, drawn to a method of interactively determining a camera position in a three-dimensional space, classified in class 382, subclass 190.
  - II. Claims 27 and 49-50, drawn to an apparatus for generating a three-dimensional geometric model and a method of combining a plurality of two-dimensional images which generates a geometric model, classified in class 382, subclass 154.
  - III. Claims 13-25, 26, 28-41, 42-48, 51-56 and 57-61, drawn to a method for generating remote presentations of products, a commerce server, a method for generating presentations of products, a method for generating a combined image, a commerce application, and a method of generating an image of a simulated space wherein the space is simulated to show an object place in a scene, classified in class 382, subclass 141.
2. The inventions are distinct, each from the other because of the following reasons:

Inventions III, I and II are related as combination and subcombination (Invention III being the combination, and inventions I and II being the subcombination). Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the details provided for in claims

1, 27 and 49-50 are not recited in claims 13-25, 26, 28-41, 42-48, 51-56 and 57-61.

The subcombination has separate utility such as locating the position of a camera, and generating 3D geometric models.

Inventions I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention I has separate utility such as locating the position of a camera, while invention II has separately utility such as generating a 3D geometric model. See MPEP § 806.05(d).

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

3. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
